Office Action Summary

Art Unit: 3661

DETAILED ACTION

This Office action is in response to the application filed by Waite et al. on September 27, 2001 for the invention titled "System and Method for Identification of Traffic Lane Positions".

Information Disclosure Statement

The IDS filed by Applicant on March 1, 2002 has been fully considered by the Examiner, as indicated by the accompanying initialed copies of Applicant's from PTO-1449.

Specification

Applicant's reference to a related application should now be corrected to refer to Ser. No. 09/964,668, and the Attorney Docket number should be deleted.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-21 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by the article submitted by Applicant in the IDS of 3/01/02 titled Automatic Lane detection..

Art Unit: 3661

The article "Automatic Lane Detection" clearly teaches a radar (microwave) sensor and data processing algorithms which automatically determine the number of lanes of traffic and their respective direction on a roadway through the use of probabilistic statistical analysis (including the use of histograms and range bins), which determine not only the number of cars which pass beneath but also the lane positions, boundaries and direction of travel.
